HORMONAL CONTRACEPTION

by Jürgen Haller

288 Pages 1969 $12.00

LC 73-98141
SBN 87672-001-7

A rough outline of the contents:

Diagnostic evidence of ovulation

Progestin-estrogen combinations

- Historical development
- Chemistry and pharmacology
- Mechanism of action
  - Including a description of methodology used

Gynecological uses
- with special emphasis on endometriosis

Oral Contraception
- Different preparations critically discussed
- Variations in method of administration
  - including recent developments such as silastic implantation, "once-a-month", "morning-after", etc.

Urinary excretion of hormones during and after treatment

Effects of long-term and short-term treatment
- on endocrine organs, on cycle and fertility, during pregnancy and lactation
- on laboratory tests, on disease processes
- risk of thrombophlebitis

Tumor growth

Advising patients
- including a question and answer section for physicians

Male fertility control

Bibliography: over 700 references
